Multi-platform modular software RIP.
Ease of use, power and flexibility to increase productivity.

DevStudio RIP 8 is the new version of the software RIP (Win - Mac OS), designed to meet the needs of the main digital printing application markets.

It is based on a client-server architecture and uses an innovative proprietary multi-channel Color Engine.

Features for production:

- Fast print engine and intuitive interface.
- Interactive assembly table with automatic or manual nesting of images.
- Automatic and manual paneling
- Print report of the jobs with preview and settings.
- Hot Folder with automatic image nesting.

Better print quality:

- The included color profiles guarantee high quality (wider gamut, better shades and details).

Lower consumption:

- Reduced consumption thanks to an optimized use of black in the profiles.
- Calculation of ink consumption in the estimate and in the final balance.

Tools for management and integration into workflows.

DevStudio RIP allows you to connect devices installed on the printer (DevStudio VAP technology) such as cameras, video cameras, video projectors and, through a simple Raspberry Pi board with display, accept inputs from buttons, barcode or QR Codes readers in order to manage jobs, give consent and feedback on the status of a job or on the status of the printer, which can also be used to create industry 4.0 ready flows.
